

45 DAYS TRAINING PROGRAM

Thread Security

Objectives : Certified Ethical Hacker

Introduction to Cyber Security

Phase - I

- Basics of Cybersecurity
- Importance of data & system protection
- Common cyber threats
- Role of coding in security

Phase - II

Introduction to Cyber Security

- Python for beginners
- Networking fundamentals
- Linux basics for security
- Encryption concepts
- Hashing for passwords
- Attack detection basics

Phase - III

Networking Basics (Industry Level)

- OSI Model (with real-world examples)
- TCP/IP Model
- IP Addressing
- Subnetting basics
- TCP vs UDP
- Common ports & protocols (SSH, HTTPS, DNS, DHCP, FTP)

Phase - IV

Switching + Routing + DNS/DHCP/NAT

- Switch working, CAM Table
- VLAN
- Routing basics (static, default, dynamic)
- DNS working (step-by-step)
- DHCP leasing
- NAT types
- Wireshark basics
- Packet analysis

Phase - V

LINUX ESSENTIALS

- Kali Linux, Metasploitable2
- Linux file system structure
- Essential commands
- Basics of shell scripting
- Managing services, users, and networking
- File permissions and SUID/SGID

Phase - VI

Fundamentals of Cybersecurity

- Core security principles (CIA Triad)
- Types of cyber attacks
- Threats, vulnerabilities, and risk management
- Layered security (Defense in Depth)
- Malware categories and behavior
- Ethical hacking vs malicious hacking
- Hacking lifecycle (recon to exploitation)

Phase - VII

Footprinting and Reconnaissance (CEH)

- Footprinting concepts & types
- Passive vs Active reconnaissance
- WHOIS & DNS enumeration
- Google Dorking (GHDB)
- Shodan for OSINT
- Username reconnaissance (Sherlock)
- Website mirroring (HTTrack)

Phase - VIII

Vulnerability Analysis, System Hacking & Password Attacks

- Vulnerability concepts & assessment
- CVSS, CVE, NVD, CWE
- Vulnerability scanning tools (Nikto, OpenVAS, OWASP ZAP, Nessus)
- Password cracking techniques
- Hashing (MD5, SHA, Bcrypt)
- Pass-the-Hash attacks
- Brute force & dictionary attacks
- Tools (Hydra, John, Hashcat)

Phase - IX

Thread Hunting & Malware Analysis

- Introduction to threat hunting
- Types of threats & malware behavior
- Threat hunting methodologies
- Indicators of Compromise (IOCS)
- Log analysis for threat detection
- Malware analysis basics (static)
- Obfuscation techniques (basics)
- Identifying suspicious activities
